WEBSITE DEVELOPMENT

MASTER PROJECT BRIEF

SAHIBZADA GUN HOUSE

Authorized Firearms Dealer

Sector 69, Mohali · Punjab · India

Comprehensive Requirements Brief for Full-Stack Developers

Including Compliance, Commercial, and Strategic Considerations

Issued by

Team Sahibzada Gun House

Phone / WhatsApp: +91 96530 01001

Document Overview

This master brief consolidates all requirements, regulatory considerations, and strategic recommendations for the Sahibzada Gun House website project. It is written specifically to bridge the knowledge gap between firearms dealers (who understand regulation deeply but not technology) and web developers (who understand technology but not firearms regulation). Read it in full before submitting a proposal.

The document is organised into the following sections:

1. About Us — who we are and what we do
2. Reference Websites — sites that exemplify what we want to achieve
3. Executive Summary — the five distinct sales flows our website must support
4. Admin Portal Requirements — full self-service capabilities
5. Product Category Structure — including pre-owned firearms and services
6. Brand Portfolio — international and Indian authorised brands
7. Homepage Requirements
8. Product-Specific Sales Flows — five separate compliance-aware paths
9. Pre-Owned Firearms — display, messaging, and trade-in positioning
10. Product Detail Pages — educational depth, photography requirements
11. Help & Licensing Centre — comprehensive customer education
12. Payment Integration — Razorpay and custom payment requests
13. WhatsApp Integration
14. Social Media Linkage
15. Customer Accounts & Loyalty
16. Regulatory Briefing for Developers — Indian Arms Act and Rules
17. Technical Preferences
18. Design & Brand Identity
19. Project Deliverables
20. Proposal Format — what we need from you
21. Strategic Recommendations & Phasing
22. Next Steps

1. About Us

Sahibzada Gun House is a licensed firearms dealership based in Sector 69, Mohali, Punjab. We operate strictly under the Arms Act 1959 and Arms Rules 2016, serving licensed sport shooters, collectors, hunters, and law-abiding citizens who hold valid Indian arms licences. We are an authorised dealer for several international and Indian firearm manufacturers (detailed in Section 6) and maintain a substantial inventory of new and pre-owned firearms, ammunition, air guns, and accessories.

We are commissioning a premium e-commerce and catalogue website to better serve our customers, showcase our inventory (including a significant pre-owned segment), educate buyers on Indian firearms regulation, and enable secure transactions where legally permitted. We are looking for a skilled full-stack developer — preferably based in Chandigarh, Mohali, or Panchkula — who can become a long-term partner for this project.

2. Reference Websites

Before reading the requirements below, please review these reference websites. They show how compliance, presentation, and customer flow are handled in the firearms retail industry — both in India and internationally. Our website should combine the best aspects of each, with a more luxurious editorial design language than any of them currently offer.

Indian Reference Sites

Kiehberg (kiehberg.in)

One of our principal suppliers. Notice how their individual product pages handle license-restricted items: instead of an Add to Cart button, the page displays the message "Documents required to purchase this product. Please contact to nearest Arms Dealer." Their category structure, product specifications, and CO2/air-gun handling are all good reference points.

Werywin (werywin.com)

An Indian firearms manufacturer in partnership with Smith & Wesson. Their "Expression of Interest" (EOI) flow for restricted items is exactly what we want to replicate: customers must submit their licence details, and the company verifies the licence number against a government ID before issuing a formal quote via email. The mandatory licence number, expiry date, and UIN fields effectively filter inquiries to genuine licence holders.

Webley India (webleyscott.in)

A reference for how heritage and brand storytelling can be integrated into a firearms website. Their "About Webley" pages tell a 230-year history. We want similar storytelling for each of our authorised brands.

International Reference Sites

Tenda Canada (gotenda.com)

A leading Canadian firearms retailer. Notable features: dedicated "Consignment" category for pre-owned firearms (a top-level navigation item), exhaustive caliber filtering, clean product page layouts, and clear shipping/compliance disclosures.

Dante Sports (dantesports.com)

Montreal-based, the gold standard for premium firearms retail. Notable features: certified gunsmith on-site (advertised on every page as a credibility signal), separate "New Firearms" and "Used Firearms"

sections, pre-order language with deposit system ("25% DEPOSIT WILL BE REQUIRED TO RESERVE"), promotional codes, and elegant editorial design language.

G4C Gun Store (g4cgunstore.com)

Markham, Ontario. Notable UX innovations: "One of a Kind" badge for unique pre-owned items, licence stored on customer profile so repeat buyers don't re-enter it on every purchase, military/law-enforcement discount tier, and a clear key-benefits page that builds trust.

3. Executive Summary — Five Sales/Service Flows

Our website must handle five fundamentally different product types, each with a distinct fulfilment path. The website backend must enforce these rules — they cannot be bypassed by the customer regardless of how they navigate. All five flows are equally important and must coexist on the same site.

Flow	Treatment
1. License-Required Firearms (New)	"Express Interest" form only — no online sale. Mandatory: licence number, expiry date, UIN. Reference: werywin.com EOI flow.
2. License-Required Firearms (Pre-Owned)	Display only as inventory. Same Express Interest form, plus 45-day intimation disclosure under Arms Act 1959. Customers contact us to discuss.
3. Ammunition	Display only — caliber filtering, full product detail. Message: "Documents required. Please contact us with valid licence." No checkout. Reference: kiehberg.in.
4. CO2 / Air Guns	Online checkout allowed BUT order pending until Aadhar uploaded and approved by admin. Payment captured only after approval.
5. Accessories & Non-Restricted	Standard e-commerce — Add to Cart, Razorpay, ship. No special documentation required.

⍰ Most Important Requirement

Team Sahibzada must have FULL CONTROL over the website with zero dependence on the developer for day-to-day operations. We must be able to add products, change prices, set discounts, update stock, mark items as sold out, upload PDFs, and edit help-centre content ALL ourselves, without ever needing to contact the developer.

4. Admin Portal Requirements

We need a separate, password-protected admin portal (e.g. accessed at /admin or admin.sahibzadagunhouse.com) where Team Sahibzada can manage everything in-house. The interface must be simple enough for a non-technical operator to use confidently after a single training session. From this portal, we should be able to:

Product & Inventory Management

- Add new products in any category, including pre-owned and exclusive imports
- Edit product names, descriptions, prices, and specifications
- Upload up to 45 high-resolution photographs per product (drag-and-drop reordering)
- Set discounts, sale prices, and "compare-at" pricing
- Update stock quantity and stock location (showroom vs. warehouse)
- Manually mark any product as Sold Out, regardless of stock count
- Tag a product with condition rating for pre-owned items (Excellent / Very Good / Good / Fair)
- Toggle products between Published and Draft (hidden from public)
- Designate one product as "Firearm of the Month" for the homepage
- Designate products as "Featured", "New Arrival", or "Exclusive at Sahibzada"

Order & Inquiry Management

- View, respond to, and update status of all Express Interest submissions
- View pending CO2/air-gun orders and approve them after Aadhar verification
- View completed orders, generate invoices, and download payment receipts
- Send custom payment requests via email, SMS, or WhatsApp (see Section 12)
- Reply to customer inquiries with one-click WhatsApp launch

Content Management

- Edit Help & Licensing Centre content (rich-text editor with formatting)
- Upload, replace, or remove PDF forms (Form A-1, Form B-2, Form III, etc.)
- Add or remove sub-categories under the Help Centre
- Add or update government website links
- Manage homepage banners, promotional notices, and announcements
- Edit brand pages (history, descriptions, dealer-authorisation badges)

Compliance & Audit

- Audit log — every admin action (price change, product add, order approval, content edit) timestamped and attributed to the user. Critical for compliance audits and internal accountability
- License expiry tracker — system alerts when a customer's stored licence is approaching expiry
- Aadhar review queue — clean interface for reviewing uploaded Aadhar cards before approving CO2/air-gun orders

> **Critical: No Developer Dependency**
>
> After the website is delivered and Team Sahibzada is trained on the admin panel, we must never need to contact the developer to add a product, change a price, upload a photo, or edit help-centre copy. Everything operational must be self-service. Please document the admin panel clearly with screenshots and a video walkthrough.

5. Product Category Structure

The categories below must be hard-coded into the navigation (not just admin-editable), because each category has different compliance behaviour on the website. Within each category, we should be able to add unlimited products and sub-tags.

5.1 New Firearms (License Required)

All items here trigger the Express Interest flow.

Handguns	Parent sub-category
→ Pistols	Semi-automatic pistols
→ Revolvers	All revolver products
Rifles	Bolt-action, lever-action, semi-auto, pump-action
Shotguns	SBBL, DBBL, Over-Under, Pump, Semi-auto

5.2 Pre-Owned Firearms (License Required)

A dedicated top-level category showcasing our pre-owned inventory. This is a major revenue stream and a key differentiator — pre-owned firearms move quickly because they are immediately available and often unique. Sub-categories mirror the new firearms structure, plus a condition-rating system.

Pre-Owned Pistols	By brand and caliber, with condition rating
Pre-Owned Revolvers	By brand and caliber, with condition rating
Pre-Owned Rifles	By brand and caliber, with condition rating
Pre-Owned Shotguns	By brand and caliber, with condition rating

Detailed treatment of pre-owned firearms is in Section 9. The website's primary purpose for this category is to display inventory with rich photography and full provenance — not to handle online appraisal or trade-in submissions. Customer interest in selling firearms to us is handled through the Help Centre, with direct contact via phone or showroom visit.

5.3 Ammunition (Restricted — Display Only)

One main category called Ammunition. Each product must be filterable by caliber, with explicit tagging for the bore distinction critical in Indian law:

- **NPB (Non-Prohibited Bore)** — civilian-permitted: .22 LR, .22 Magnum, .25 ACP, .32 ACP, .32 S&W, .32 S&W Long, .315 Sporting (8x50R), .380 ACP, .455, 12 Gauge, 16 Gauge, 20 Gauge, 28 Gauge, .410 Bore, 12 Bore Brenneke slugs
- **PB (Prohibited Bore)** — restricted licences only: 9×19mm, .38 Special, .357 Magnum, .45 ACP, 7.62×39, 7.62×54R, 5.56 NATO, .308 Win, .300 Win Mag, .303 British
- **Air-gun pellets and BBs** — no licence required: .177 (4.5mm), .22 (5.5mm), .25 (6.35mm), steel BBs, copper-coated BBs

Each ammunition product page should be clearly tagged "NPB", "PB", or "Air-Gun" so customers know upfront whether their licence type permits purchase. Air-gun pellets are the only ammunition that can be sold without licence verification.

5.4 CO2 Pistols & Air Guns (Aadhar Verification)

Sub-categories for: CO2 Pistols, CO2 Revolvers, Air Pistols, Air Rifles. These are sold online but with conditional fulfilment — see Section 8.4. Important regulatory note: under Arms Rules 2016, air weapons exceeding 20 joules muzzle energy or 4.5mm bore are subject to licensing. Each product must clearly display its muzzle energy specification.

5.5 Accessories (Open Sale)

Sub-categories for: Holsters, Optics & Sights, Cleaning Kits, Gun Cases, Targets, Apparel, Books & Manuals, Spare Parts, Magazines (where legally permitted), Safes & Storage. Standard online checkout — Add to Cart, pay, ship.

5.6 Services (Appointment-Based)

Gunsmithing services are a key trust-builder and revenue stream. Reference: Dante Sports advertises "A certified gunsmith will repair and restore firearms on site" — this single credibility signal differentiates us from re-sellers.

Listed services include:

- General cleaning and inspection (annual / pre-season)
- Sight installation and zeroing (open sights, scopes, red dots)
- Trigger work (within bore-restriction guidelines)
- Stock fitting and refinishing
- Magazine repair and spring replacement
- Recoil pad installation
- Bore conversion guidance (smoothbore to rifled — coordinated with licensing authority)

- Antique and heirloom firearm restoration
- Pre-purchase inspection (for someone considering buying a private firearm)

Each service should have its own page with description, indicative price range, expected turnaround, and a service-request form (date selection, firearm description, photos, preferred drop-off date). A gunsmith introduction page with name, qualifications, and a photograph at the workbench builds significant trust.

6. Brand Portfolio

Sahibzada Gun House is an authorised dealer for a substantial portfolio of international and Indian manufacturers. Each brand deserves dedicated visibility on the website — a landing page, a brand filter on category pages, and the authorised-dealer credential displayed prominently.

International Authorised Brands

Brand	Notes
Kiehberg GmbH	Germany — premium 1911s and pistols, in cooperation with Girsan and SIIL India
Beretta	Italy — heritage Italian manufacturer, full pistol and shotgun lines
Girsan	Turkey — modern service pistols and pistol platforms
Alfaproj	Czech Republic — revolvers and sporting firearms
[Additional imports]	Exclusive imports to be added by Team Sahibzada in admin panel

Indian Authorised Brands

Brand	Notes
Webley & Scott (India)	Manufactured by Sial Manufacturers in Sandila, Hardoi. Iconic British heritage brand revived for the Indian market — revolvers, pistols, airguns. Strong sport-shooter following.
Malhotra Defence (Malhotrasons)	Premium Indian 1911 manufacturer. Their Guardian 1911 is a benchmark domestic product. Limited availability, premium pricing — well-suited to our luxury positioning.
Nanda Arms Corp	Lucknow-based manufacturer producing modern double-stack pistols. Reportedly collaborating with Baikal. Good value-for-money positioning.
SIIL / Kiehberg India	Syndicate Innovations International Limited — assembly partner for Kiehberg in India.
Indian Ordnance Factory	Civilian variants of IOF products. Government-manufactured, often the most affordable entry point.

Brand	Notes
Other domestic	List is non-exhaustive and growing. Vendors emerging in Punjab and Madhya Pradesh post-2016 manufacturing licensing expansion.

Exclusive Imports — Marketing Showcase

Sahibzada carries imports that are not available with other Indian dealers. This is a major competitive advantage and deserves dedicated marketing treatment:

- Top-level navigation item: "Exclusive at Sahibzada"
- Homepage section dedicated to exclusive imports
- High-end editorial photography and detailed provenance for each item
- Limited-quantity counters where applicable ("Only 3 available in India")
- Full origin storytelling — country of manufacture, history of the model, why it's exclusive

Brand Page Treatment

Each authorised brand should have its own landing page including:

- Brand history and country of origin
- What makes the brand distinctive (engineering, materials, heritage)
- Photographs of factory, design heritage, or notable products
- Curated grid of products we currently stock from that brand
- "Authorized Dealer" badge with optional certificate scan
- Catalogue PDF download where the manufacturer provides one

7. Homepage Requirements

The homepage must include the following sections, in order from top to bottom:

23. Top navigation bar with logo, category links, search, account, and cart icons
24. Help & Licensing Centre link prominently placed in the top navigation
25. Hero section with brand introduction and primary call-to-action
26. "Firearm of the Month" highlighted segment — single hero product card showcased prominently. Admin-designated from the panel
27. Featured categories (Pistols, Revolvers, Rifles, Shotguns, Pre-Owned, Ammunition, Accessories) as clickable tiles
28. "Exclusive at Sahibzada" section — imports unavailable elsewhere
29. Trust strip — three columns: licence credentials, authorised-dealer status, Mohali storefront
30. Featured Products grid — 6 to 8 manually-curated products
31. Pre-Owned Spotlight — preview of latest pre-owned inventory with link to full category
32. Storefront section with photographs of our physical Mohali shop, address, hours, contact
33. Instagram feed embed — latest 6–9 posts in a grid, auto-updated
34. Newsletter signup
35. Footer with full navigation, social icons, legal disclaimers, regulatory notices, contact info

8. Product-Specific Sales Flows

Each product type has a distinct fulfilment path. The website backend MUST enforce these rules — they cannot be bypassed by the customer regardless of how they navigate.

8.1 New License-Required Firearms — Express Interest Flow

Reference: Werywin website Expression of Interest pattern.

Customer-facing behaviour

- Product page shows full specifications, all photographs, indicative price (with GST disclosure)
- Instead of "Add to Cart", the button reads "Express Interest" or "Reserve in Store"
- Clicking opens a form (modal or dedicated page)

Form fields

- **Full Name** (mandatory)
- **Mobile Number** (mandatory, with OTP verification)
- **Email** (mandatory)
- **Indian Arms Licence Number** (mandatory, format-validated)
- **Licence Expiry Date** (mandatory, must be future date)
- **UIN (Unique Identification Number)** (mandatory)
- **Issuing State / Authority** (mandatory)
- **City and State of Residence** (mandatory)
- **Government ID upload** (Aadhar, PAN, or Driving Licence — optional but encouraged)
- **Notes / Preferred appointment time** (optional)

Backend behaviour

- Form submission creates an "Inquiry" record in the admin panel with timestamp
- Inquiry status flow: New → Reviewed → Verified → Quote Sent → Reserved → Completed → Cancelled
- Email notification sent to admin instantly when new inquiry arrives
- Auto-reply email to customer confirming receipt and explaining next steps
- Customer's data stored encrypted and never shown publicly
- Admin can mark licence as verified after physical or document verification
- Admin can send formal quote document from within the admin panel (PDF attachment)

8.2 Pre-Owned License-Required Firearms

Same Express Interest flow as new firearms, with one critical addition: a clear disclosure of the 45-day intimation period required under the Arms Act 1959 before any pre-owned firearm can be transferred to the buyer.

> **⚠ Compliance — 45-Day Intimation Rule**
>
> Under Section 5 of the Arms Act 1959 (and reaffirmed by Arms Rules 2016), any sale or transfer of a licensed firearm requires WRITTEN INTIMATION to the District Magistrate or nearest police station 45 days BEFORE the sale, naming the intended buyer. The website must reflect this. Suggested copy on every pre-owned firearm page: "This pre-owned firearm is subject to the mandatory 45-day intimation period under the Arms Act 1959. Final ownership transfer occurs in-store after regulatory clearance."

8.3 Ammunition — Display Only

Reference: Kiehberg-style restriction message.

- Product page shows full details and specifications for educational purposes
- Caliber filter must be functional and prominent
- NPB / PB / Air-Gun tagging clearly visible
- NO Add to Cart button. NO Express Interest form. NO checkout path
- Display this exact message in a prominent gold/emerald banner: **"Documents required to purchase this item. Please contact or visit Sahibzada Gun House with a valid Firearm licence. Phone: +91 9653 001 001."**
- "Call Us" and "WhatsApp Us" buttons below the message
- Optional: Save to Wishlist so customers can bookmark calibers for later purchase

8.4 CO2 Pistols & Air Guns — Aadhar Pending Approval Flow

Customer-facing behaviour

- Standard "Add to Cart" button
- Customer can browse, add to cart, and proceed to checkout normally
- During checkout, an Aadhar card upload field is mandatory
- Customer pays online via Razorpay (full payment or partial deposit)

- Order confirmation email reads: "Order Pending — awaiting Aadhar verification. We will email you within 24 hours."
- Order status visible in customer's account: Pending Approval → Approved → Shipped → Delivered

Backend behaviour

- Order created with status PENDING_APPROVAL (not PAID, not PROCESSING)
- Admin sees order in dedicated "Pending Aadhar Review" queue
- Admin views uploaded Aadhar, then clicks Approve or Reject
- **If approved:** order moves to PROCESSING, customer emailed, payment captured
- **If rejected:** payment auto-refunded via Razorpay, customer emailed with reason
- Aadhar uploads stored encrypted, accessible only by admin, masked on display (last 4 digits visible)
- Aadhar files auto-deleted after order fulfilment + audit retention period (per UIDAI guidelines)

8.5 Accessories — Standard E-commerce Flow

- Standard "Add to Cart" button
- Add to Cart → Cart → Checkout → Razorpay → Order confirmation → Ship
- No licence, Aadhar, or special documentation required
- Standard shipping flow with tracking number
- Standard return / replacement policy as per Indian e-commerce norms

9. Pre-Owned Firearms — Display & Positioning

Sahibzada has a substantial pre-owned inventory and pre-owned firearms move quickly because they are immediately available, often unique, and priced more attractively than new. Our primary purpose for this section of the website is INVENTORY DISPLAY — showcasing what we have so customers can browse and inquire.

We are NOT looking to build a complex online appraisal or trade-in submission system. Customers interested in selling firearms to us, trading in their old firearm, or seeking guidance on sale permissions will be directed through the Help Centre to contact us by phone, WhatsApp, or showroom visit. Keep this part lean.

9.1 Inventory Display Requirements

- Top-level navigation item: "Pre-Owned Firearms"
- Sub-categories mirror new firearms: Pistols, Revolvers, Rifles, Shotguns
- Each pre-owned product page must clearly display:
  - Condition rating (Excellent / Very Good / Good / Fair) with brief description of what each means
  - Year of manufacture if known
  - Original-box / accessories included (or not)
  - Any service history we know of
  - Reason for sale if disclosed (often a positive selling point: "Owner relocating abroad")
- Photo galleries are MORE important than for new firearms — collectors want to see every detail. Up to 45 photos per item especially applies here
- "One of a Kind" badge for unique pre-owned items, since once sold they cannot be replaced (G4C pattern)
- "Recently Listed" filter so repeat customers can quickly find what's new
- Same Express Interest flow as new firearms (Section 8.1) plus 45-day intimation disclosure (Section 8.2)

9.2 Trade-In Positioning Through Help Centre

Rather than building a complex online trade-in form, we will use the Help Centre and homepage messaging to invite customers to contact us directly:

- Dedicated Help Centre article: "Selling Your Firearm — How We Can Help"

- This article should explain: the regulatory steps needed (sale permission, 45-day intimation), the documentation we'll need from the seller, and our commitment to fair pricing
- Our pitch (worded carefully and prominently in the Help Centre):

> **Sahibzada Trade-In Promise (Help Centre Messaging)**
>
> We welcome trading deals and offer the best prices for pre-owned firearms in Punjab. If you are looking to sell your licensed firearm or trade up to something new, our team assists with the entire process — from obtaining sale permission from the District Magistrate, to handling the 45-day intimation, to fair valuation. Visit our showroom in Sector 69, Mohali, or call us at +91 96530 01001 to discuss.

This single-block messaging gives us competitive trade-in advantage without requiring extensive form-handling on the website. Customers self-select by calling us — and that phone conversation is where the real evaluation happens anyway.

10. Product Detail Pages — Educational Focus

Our purpose is to educate customers about what we sell, not just push transactions. Every product detail page must support extensive content. The page layout should resemble premium watch or luxury automobile websites where customers can explore a product deeply.

Image gallery

- Support up to 45 photographs per product
- Gallery formats: main image with thumbnail strip, lightbox for full-screen viewing, zoom-on-hover, 360° spin if photos uploaded as a sequence
- Admin uploads photos in any order, then drags-and-drops to reorder
- Each photo can have an optional caption (e.g. "Trigger detail", "Frame markings", "Magazine release")

Product description

- Long-form rich-text editor (formatting, headings, bullet points, embedded video links)
- No character limit — detailed descriptions covering history, manufacturing, materials, intended use, maintenance, comparable models
- Sections within description should be collapsible (Specifications, Ballistics, Maintenance, Legal Notes)

Specifications table

Admin-defined key-value pairs. Examples for firearms:

- Caliber, Action Type, Capacity, Barrel Length, Overall Length, Weight, Country of Manufacture, Frame Material, Slide Material, Sights, Trigger Pull, Twist Rate, NPB/PB classification

Other elements

- Related Products section (manually curated or auto-generated by category/brand)
- Compatible Accessories section (auto-populated from product tags — e.g. holsters that fit this pistol)
- Customer Reviews / Testimonials (admin-moderated)
- Q&A section per product (public questions, admin answers — also helps SEO)
- Downloadable manual / spec sheet (PDF)
- Embedded video review or demonstration (YouTube link)
- "Share to WhatsApp" and other social share buttons
- "Notify me when available" form for out-of-stock items

11. Help & Licensing Centre

A dedicated section accessible from the top navigation bar. This is a major value-add for our customers — most don't know how to navigate the licensing process. All content must be admin-editable.

11.1 Structure

- Main Help Centre page with sub-categories displayed as cards or accordion sections
- Admin can create, rename, reorder, and delete sub-categories
- Each sub-category has a long-form article (rich-text editor)
- Each sub-category can host downloadable PDF forms (multiple per category)
- Each sub-category can host external links to government websites

11.2 Initial Sub-Categories

36. How to Apply for an Arms Licence in Punjab (state-by-state guidance)
37. How to Renew an Existing Arms Licence
38. How to Apply for a UIN (Unique Identification Number)
39. How to Change Bore (Smoothbore to Rifled, etc.)
40. How to Add a Weapon Endorsement to Your Licence
41. How to Transfer a Licence (e.g. inherited firearms)
42. How to Surrender or Deposit a Firearm
43. Travel and Transport Rules for Licensed Firearms
44. Selling Your Firearm — How Sahibzada Can Help (trade-in messaging from Section 9.2)
45. Arms Act and Arms Rules — Plain Language Summary
46. FAQ: Common Questions About Owning a Firearm in India

11.3 PDF Management

- Admin uploads PDFs (Form A-1, A-2, B-2, Form III, Form IV, NDAL forms, etc.)
- Admin tags each PDF under one or more sub-categories
- Customers see a clear "Download PDF" button next to each form
- Each download is logged for analytics (popular forms surface customer demand)

11.4 Government Links

Admin-editable list of trusted government and regulatory links:

- Ministry of Home Affairs — Arms Licensing Portal
- Punjab Police — Arms Licence Information
- DGFT (Directorate General of Foreign Trade) — Import Information
- State Police Headquarters arms branches
- NDAL-ALIS public portal

12. Payment Integration

12.1 Razorpay Standard Integration

- Razorpay payment gateway for all standard online payments
- Support for credit cards, debit cards, UPI, net banking, wallets
- International cards must be accepted (Razorpay International activation required)
- Payment receipts auto-generated and emailed
- Refund processing must be possible from the admin panel
- All transactions visible in admin dashboard with status filters

12.2 Custom Payment Request Feature

Critical feature: customers often visit our store, agree on a price, and then want to pay later from home. Team Sahibzada wants to send them a secure payment link so they don't need to share card details over the phone or visit again.

Admin side

47. In admin panel, click "Send Payment Request"
48. Enter customer name, amount, optional product reference, optional notes
49. Choose delivery method: Email, SMS, or WhatsApp
50. Enter recipient's email or phone number
51. System generates a unique secure payment link (e.g. sahibzadagunhouse.com/pay/abc123)
52. System sends link via chosen channel with customizable message

Customer side

53. Customer receives link via email/SMS/WhatsApp
54. Clicking opens secure Razorpay payment page on our domain
55. They see amount, brand, reference notes
56. They pay with any card / UPI / net banking method
57. Receipt auto-generated and emailed
58. Admin sees payment as Completed in dashboard

Other features

- Each payment link should have a configurable expiry (e.g. 7 days)
- Links should be one-time-use unless explicitly marked as multi-use

- Admin can cancel a payment link before it's used
- All payment requests appear in admin dashboard with status: Sent, Viewed, Paid, Expired, Cancelled

13. WhatsApp Integration

Customer-Facing

- Floating WhatsApp button visible on every page (bottom-right corner)
- Clicking opens WhatsApp with our number pre-filled and contextual default message (e.g. "Hi, I'm interested in [Product Name]")
- "Share to WhatsApp" button on every product page so customers can forward to friends
- Order confirmations optionally sent via WhatsApp (in addition to email)

Admin-Side

- Send custom payment requests via WhatsApp (Section 12.2)
- Send order shipping updates via WhatsApp
- Reply to Express Interest inquiries with one click — opens WhatsApp pre-filled to that customer's number
- Optional: WhatsApp Business API integration for automated notifications (if budget permits)

14. Social Media Linkage

In the Indian firearms market, Instagram and YouTube are where buying decisions are increasingly made. Customers research products on Instagram reels, follow shooting sports influencers, and judge dealer credibility by social presence.

14.1 Required Features

- Footer social icons linking to: Instagram, Facebook, YouTube, X (Twitter), LinkedIn, WhatsApp Business
- Instagram feed embed on the homepage (latest 6–9 posts in a grid). Use Instagram Basic Display API or service like Curator.io. Keeps homepage feeling fresh without manual updates
- "Share to" buttons on every product page: WhatsApp (most important in India), Instagram Story, Facebook, X, Email
- YouTube video embeds on relevant product pages
- Open Graph metadata properly configured — when someone shares a product link to WhatsApp, it shows a beautiful preview card with image, title, price
- Pinterest "Save" button for collectors who use Pinterest
- Newsletter signup integrated with email service (Mailchimp / SendGrid)

14.2 Cross-Posting Workflow

Discuss with the developer how the CMS can simplify cross-posting. When admin publishes a new product, the system should be able to auto-generate a draft Instagram caption + image package (correct dimensions, hashtag suggestions) that admin can post manually. Saves hours.

15. Customer Accounts & License-on-File

Reference: G4C in Canada has a feature where, once a customer's licence is verified at first purchase, it is stored against their account so future purchases don't require re-verification. This pattern translates directly to Sahibzada and dramatically improves repeat-buyer experience.

15.1 Account Features

- Customer creates account on first purchase or first Express Interest submission
- Licence number, UIN, expiry date stored encrypted against account profile
- On subsequent visits, customer logs in and forms pre-fill
- System automatically alerts admin (and customer) 60 days before licence expiry: "Your arms licence expires soon. Please update your records."
- Customer dashboard shows: previous purchases, pending Express Interest inquiries, gunsmithing service history, payment receipts, downloadable invoices, wishlist
- Saved addresses for repeat customers
- This becomes the foundation for a loyalty/CRM layer over time

15.2 Optional Enhancements (Phase 2)

- Loyalty points ("Earn 1 point per ₹100 spent, redeem at checkout")
- Member tiers (Standard, Silver, Gold based on spend)
- Refer-a-friend program with tracking codes
- Gift cards (digital, emailed)
- Military / Police / Veteran discount tier (G4C offers 5% to active military)

16. Regulatory Briefing for Developers

This section is written specifically for the developer who wins the project. Most Indian developers will not be familiar with firearms regulation. Without understanding the rules, they will build features that look fine but break compliance silently. Print this section and brief the developer in person.

16.1 The Two-Bore Distinction (NPB vs PB)

Indian arms licensing distinguishes between Non-Prohibited Bore (NPB) and Prohibited Bore (PB) firearms and ammunition. Civilian licences overwhelmingly cover NPB only. PB items can only be sold to specific licence categories. The website's product database needs an explicit field for this — never assume.

16.2 Form Types You'll See in Customer Documentation

Form	What it means
Form III	Individual arms licence — most common form a customer will hold
Form A-1 to A-14	Licence application forms — used for new applications, renewals, etc.
Form VIII	Arms dealer licence — Sahibzada holds this
Form VIII-A	Air weapon dealer licence — separate, may also be required
Form IX / IX-A	Ammunition dealer licence
Form XIV	Bulk transporter licence — only relevant for large consignments
UIN	Unique Identification Number — mandated for ALL licence holders. Must accompany licence number on every transaction

16.3 The 45-Day Intimation Rule (Critical)

Section 5 of the Arms Act 1959 mandates 45-day written intimation to the District Magistrate before any sale or transfer of a licensed firearm. This applies to dealer transfers as well, unless DM grants written permission to skip the waiting period. The website cannot promise instant transfer of a pre-owned licensed firearm. Build this delay into copy and into expectation-setting.

16.4 NDAL-ALIS — The Government System

The National Database of Arms Licences — Arms Licensing Information System is the central government registry of all licence holders and their registered firearms. Licence numbers and UINs are validated through this system. The website does NOT need to integrate with NDAL-ALIS (no public API), but the developer should understand that this is the source of truth — licence numbers are not arbitrary.

16.5 Air Weapons — Regulatory Thresholds

Following 2016 rules, air weapons exceeding 20 joules muzzle energy or 4.5mm bore are subject to the same licensing requirements as conventional firearms. Below those thresholds, no licence is required, BUT each State Government's SOP requires registration and an ALNR (Arms Licence Not Required) certificate after testing. Each air gun product page should clearly display muzzle energy and the registration requirement.

16.6 Aadhar Handling — UIDAI Rules

If you collect Aadhar for the CO2/air gun verification flow, UIDAI rules apply:

- Aadhar can only be used with the holder's consent
- Must be stored encrypted at rest
- Should be masked in any display (only last 4 digits visible)
- Cannot be used for purposes beyond the stated one
- Should be deleted once the legitimate purpose is fulfilled (post-fulfilment + audit retention)
- Use Aadhar offline e-KYC if integration is feasible — much safer than handling raw card images

16.7 OCI Cardholders

Overseas Citizen of India cardholders CAN obtain arms licences under the family heirloom category. The website's customer account flow should support international addresses and OCI licence types — Sahibzada serves customers based both in India and abroad.

16.8 Other Compliance Patterns Worth Building In

- Geo-blocking by state — some states have stricter rules; admin can flag certain products as not deliverable to certain states
- Age gate on entry ("You must be 18+ to view this site") — appears once, stores a cookie
- Mandatory regulatory notices on product pages, cart, and checkout — auto-generated from compliance flags so they cannot be accidentally removed
- Audit log — every admin action timestamped and attributed. Critical for compliance audits

17. Technical Preferences

Team Sahibzada is open to whatever modern stack the developer recommends, as long as the result is fast, secure, easy to manage, and reasonably priced to host. Common options include:

Approach	Trade-offs
Custom build (Next.js + Prisma + PostgreSQL)	Most flexibility, full control over compliance logic. Higher build cost, lower long-term maintenance.
WordPress + WooCommerce + custom plugins	Faster build, larger developer pool, easy admin. Compliance gating via custom plugins.
Shopify + custom app	Fastest build, professional admin out of the box. Some compliance flows may need workarounds.
Other framework you recommend	Open to suggestions if you can justify it.

Whatever you recommend, please justify it in your proposal — including monthly hosting costs, expected build time, ease of maintenance, and your familiarity with it.

Non-Negotiable Technical Requirements

- Mobile-responsive — most of our customers browse on phones. Mobile-first design
- Fast page loads (under 3 seconds on 4G)
- SSL/HTTPS everywhere
- Secure handling of licence numbers, Aadhar uploads, customer PII (encrypted at rest)
- SEO-friendly URLs and metadata for every product, brand, and category
- Google Analytics or similar integration
- Database backups, automated, daily, stored off-site
- Admin panel accessible from desktop AND mobile
- Source code, database, and domain registration owned by Team Sahibzada — not the developer

18. Design & Brand Identity

Detailed mockups and a working HTML prototype have already been prepared and will be shared with the selected developer. The design language is luxurious, editorial, and authoritative — closer to a premium watch boutique or bespoke tailoring website than a typical Indian e-commerce site.

Brand Colours

- Deep emerald green (#064E3B) — primary brand colour
- Rich gold (#D4AF37) — accents, CTAs, badges
- Ivory / off-white (#FAF7F2) — page backgrounds
- Charcoal (#1F2937) — body text

Typography

- Headings: Playfair Display (serif) or similar editorial serif
- Body: Inter or Roboto (clean sans-serif)

19. Project Deliverables

59. Fully functional website hosted on a domain we own
60. Admin panel with all features described in Section 4
61. All five sales/service flows working correctly (Section 8)
62. Pre-owned firearms inventory display (Section 9)
63. Help & Licensing Centre with PDF management (Section 11)
64. Razorpay payment integration including international cards (Section 12)
65. Custom payment request feature
66. WhatsApp integration (Section 13)
67. Social media linkage including Instagram feed (Section 14)
68. Customer account system with licence-on-file (Section 15)
69. Mobile-responsive design across all pages
70. SEO basics (meta tags, sitemap, robots.txt)
71. Initial seed of 20–30 products that we provide content for
72. Admin training: 1-hour session (in-person in Mohali or video call) covering all panel features
73. Written documentation or video walkthrough we can refer back to
74. Source code handover (for custom builds) or admin access (for Shopify/WordPress)
75. 30 days of post-launch bug fixes included
76. Optional ongoing maintenance retainer (negotiated separately)

20. Proposal Format — What We Need From You

Please send the following so we can compare proposals fairly:

77. Brief introduction — who you are, where you're based, your team size
78. Portfolio — 3 to 5 examples of e-commerce or premium-brand websites you've built (please include live links)
79. Recommended tech stack and why
80. Estimated timeline from contract signing to go-live
81. Total project cost in INR (one-time build), broken out by phases (see Section 21)
82. Estimated monthly hosting and maintenance cost
83. Payment terms (e.g. 30% upfront, 30% at midpoint, 40% on delivery)
84. Two professional references we can call
85. Confirmation that you are based in Chandigarh / Mohali / Panchkula or can meet in person regularly
86. Demonstrate that you have read Section 16 (Regulatory Briefing) by referencing at least one specific compliance point in your proposal

> **Budget Approach**
>
> We are looking for the right partner at a fair, nominal price — not the cheapest quote, but also not enterprise pricing. We'd rather pay reasonably for quality, ongoing support, and someone we can build a long-term working relationship with. If your quote is significantly higher than typical, please justify it. If significantly lower, please clarify what's included.

21. Strategic Recommendations & Phasing

21.1 Phase the Build

This brief is substantial. Single-phase delivery would take 4–6 months and cost significantly. We recommend phasing:

Phase	Scope
Phase 1 (3 months)	Core catalog including new firearms, ammunition, accessories, CO2/air guns. All five sales flows. Admin panel core functions. Razorpay integration. WhatsApp basics. Help Centre with initial articles. Brand pages. Homepage with Firearm of the Month.
Phase 2 (2–3 months later)	Pre-owned firearms section. Customer accounts with licence-on-file. Wishlist. Product reviews and Q&A. Gunsmithing services pages. Instagram feed embed. Custom payment request feature.
Phase 3 (later, optional)	Loyalty points, blog/CMS expansion, multi-language support, advanced analytics, military/police discount tier.

21.2 Beware the Over-Built Admin Panel

Developers often build admin panels with too many fields, too many options, too many buttons. Insist on a clean, simple admin UI that fits operational reality. Ask the developer to show admin panel screens BEFORE building backend logic, so we can object early. Test it with someone non-technical — if they get confused in the first 5 minutes, the design is wrong.

21.3 Hire a Specialist Photographer

The website is only as good as its product photography. The 45-photo specification is meaningless if photos look amateur. Budget separately for professional product photography — ideally a photographer who has shot watches, jewellery, or luxury small objects. They know how to handle reflective metal, leather grips, and macro detail.

21.4 Plan Content Production in Parallel

While the developer builds, Team Sahibzada (or a delegated content writer) should be drafting product descriptions, Help Centre articles, and brand pages. Most Indian websites launch with placeholder copy because content was an afterthought. Aim for 30 fully-described products and 10 Help Centre articles ready BEFORE launch.

21.5 Treat the Website as a 5-Year Asset

Don't optimise for the cheapest build. Optimise for: (a) ability to maintain it ourselves for 5 years, (b) ability to add new features as the business grows, (c) ability to switch developers without losing data. Insist that source code, database, and domain registration are owned by Team Sahibzada, not the developer. Get backups regularly and store them off-site.

21.6 Keep an Industry Eye Open

Indian firearms regulations and the broader civilian arms market are in flux. Post-2016 the private manufacturing sector has expanded; SIIL/Kiehberg, Webley/Sial, Malhotrasons, Nanda Arms have all entered the market within five years. Werywin entered with Smith & Wesson partnership in 2020. The website should be flexible enough to add new brands and product types as they emerge — don't lock the data model to today's catalogue.

22. Next Steps

If you've read this far, thank you. Here's how to proceed:

87. Send your proposal to us via WhatsApp at +91 96530 01001 or request our email address
88. We will review proposals and shortlist 2–3 candidates within one week
89. Shortlisted candidates will be invited to a meeting (in-person at our Mohali shop or via video call)
90. We will share the design mockups and HTML prototype during this meeting
91. Final selection will be made within two weeks of proposal submission

The Indian firearms retail market is structurally underserved by digital infrastructure. By building a website that is both compliant AND world-class in user experience, Sahibzada Gun House is not just selling firearms — it is setting a standard for how this industry should operate online in India. That's a meaningful position to occupy, and we're looking for the right partner to help us get there.

Team Sahibzada Gun House

Authorised Firearms Dealer · Sector 69, Mohali, Punjab
